

MOBILIZING THREAT REMEDIATION

Identify zero-day indicators of attack from any one vector, and then mobilize threat remediation to the rest of the security stack automatically.

EXECUTIVE SUMMARY

Veriti's Mobilizing Threat Remediation solution provides a proactive and automated approach to threat detection and response, focusing on efficiently managing indicators of compromise (IoC). By integrating seamlessly with existing security infrastructure, Veriti enables real-time analysis and automated propagation of threat intelligence, ensuring that all security layers are updated promptly. This solution helps organizations stay ahead of emerging threats, reduces the workload on security teams, and ensures a coordinated response to security incidents, thereby enhancing the overall security posture.

MOBILIZING THREAT REMEDIATION

Veriti's Mobilizing Threat Remediation capability is designed to address the challenges of managing and responding to zero-day threats and other sophisticated attacks. The platform utilizes advanced machine learning to detect and generate additional IoC indicators, allowing for quick identification and response to potential threats. Veriti's solution automates the dissemination of these indicators across all security tools and layers, ensuring a unified and coordinated defense. This approach minimizes the response time to threats and enhances the efficiency of security operations, reducing the risk of breaches and minimizing the impact on business operations.

BENEFITS

REDUCE ANALYST WORKLOAD

Automates the identification and propagation of threat indicators, freeing up security analysts to focus on more strategic tasks.

FASTER RESPONSE TIMES

Minimize mean time to detect and react to threats, reducing the window of vulnerability and preventing potential breaches.

CONSISTENT PROTECTION

Maintain up-to-date defenses across all security tools, ensuring a uniform response to threats and minimizing the risk of misconfigurations or gaps.

PROACTIVE THREAT MANAGEMENT

Stay ahead of emerging threats with continuous monitoring and automated updates, ensuring a resilient and adaptive security posture.

KEY FEATURES

AUTOMATED DETECTION OF MALICIOUS INDICATORS

JUST-IN-TIME RESPONSE

CROSS-STACK COORDINATION
