

COMPREHENSIVE ENDPOINT SECURITY AND SAFE EXPOSURE REMEDIATION

Enhance and align your endpoint security measures with active threats, while ensuring seamless remediation with the combined power of CrowdStrike's Endpoint Security and Veriti's Exposure Assessment and Remediation.

EXECUTIVE SUMMARY

The integration of CrowdStrike's Endpoint Security with Veriti's Exposure Assessment and Remediation delivers a powerful solution for protecting your organization's endpoints against evolving threats. This partnership enables organizations to identify gaps in prevention policies, harden the relevant controls and align them with the latest threat intelligence specific to their industry, geographic location and relevant attack groups. By correlating endpoint data with other security solutions within the organization, this integration ensures a comprehensive security posture that addresses potential vulnerabilities. Additionally, Veriti's machine learning capabilities allow for the implementation of necessary policy changes without disrupting business operations, ensuring that endpoints remain secure and operational at all times.

COMPREHENSIVE ENDPOINT SECURITY

CrowdStrike's Endpoint Security and Veriti's Exposure Assessment and Remediation work together to provide a holistic approach to endpoint security. This integration allows organizations to identify gaps and misconfigurations in their current endpoint security prevention policies, and on the OS-Level of the endpoint themselves. It also ensures that they are aligned with the latest threat intelligence tailored to their specific industry, geographic region and relevant attack groups. Veriti's Exposure Assessment and Remediation solutions leverages CrowdStrike Endpoint Security to implement the necessary mobilization of remediation.

SOLUTION BENEFITS

Targeted Endpoint Protection: Enhance your endpoint security by aligning policies with active threats specific to your industry and geographic location, ensuring targeted and effective protection.

Comprehensive Threat Visibility: Gain a unified view of your security posture by correlating endpoint data with other security solutions, enabling more informed and strategic decision-making.

Efficient Policy Management: Streamline the process of implementing security policy changes with automation, ensuring that your endpoints remain secure without disrupting business operations

Continuous Business Operations: Maintain business continuity while enhancing endpoint security, ensuring necessary policy adjustments do not interfere with day-to-day activities. reducing complexity and resource demands.

KEY FEATURES:

- Policy Gaps and Misconfiguration Identification
- Hardening Endpoints at the OS-Level
- One-click Policy Hardening and Implementation
