

UNIFIED SECURITY MANAGEMENT AND AUTOMATED REMEDIATION WITH NEXTGEN SIEM

Assess, aggregate, and optimize security configurations across all platforms with the combined power of CrowdStrike’s NextGen SIEM (including Fusion SOAR automations) and Veriti’s Exposure Assessment and Remediation.

EXECUTIVE SUMMARY

The integration of CrowdStrike’s NextGen SIEM, including Fusion SOAR automations, with Veriti’s Exposure Assessment and Remediation provides organizations with a powerful, unified approach to managing their entire security ecosystem. This comprehensive solution aggregates security configurations, logs, and remediations across all platforms into a single, intuitive console, enabling security teams to assess and manage their entire infrastructure efficiently. By cross-correlating detections from all security tools and eliminating false positives, this integration ensures that only accurate, actionable intelligence is used to enforce prioritized changes across the security stack.

AUTOMATED REMEDIATION WITH NEXT-GEN SIEM

CrowdStrike’s NextGen SIEM, including Fusion SOAR automations, and Veriti’s Exposure Assessment and Remediation work together to deliver a seamless, unified security management experience. By aggregating security configurations, logs, and remediation actions from all platforms—including OS, EDR, Firewall, SASE, IaaS, VA, CAASM, BAS, CSPM, and ASM—into one intuitive console, this solution provides comprehensive visibility into your entire security infrastructure. The integration cross-correlates detections from all security tools, reducing false positives to ensure that SOC teams can confidently and safely remediate exposures without disrupting the business.

SOLUTION BENEFITS

Consolidated Security Management:

Gain full visibility and control over your entire security infrastructure by aggregating configurations, logs, and remediations into one unified console.

Accurate Threat Detection: Reduce noise and focus on actionable intelligence by cross-correlating detections and eliminating false positives.

Efficient Remediation: Streamline the remediation process by enforcing prioritized changes across your security stack. Address the most critical threats with precision.

Optimized Security Operations: Improve the efficiency of your security operations by managing your security from a single platform, reducing complexity and resource demands.

KEY FEATURES:

Unified Security Console

Comprehensive Visibility Across the Security Stack

Prioritized Remediation that is Verified for Business Continuity
