

# First Proactive Cloud Native Remediation Platform

Automate misconfiguration and vulnerability remediation proactively across on-prem and cloud.

## Executive Summary

Cloud environments have become the backbone of modern organizations, the complexity and volume of misconfigurations and vulnerabilities have emerged as the leading causes of breaches. According to Gartner, cloud misconfigurations account for 65% of cloud breaches. Traditional CNAPPs (Cloud Native Application Protection Platforms) focus heavily on detection and visibility, yet actionable remediation remains an industry gap. Veriti Cloud aims to fill this void by automating misconfiguration and vulnerability remediation, effectively addressing risks before exploitation.

## Safe, Predictable Cloud Security

Enter Veriti Cloud, the industry's first Proactive Cloud Native Remediation Platform. Veriti Cloud empowers security teams to aggregate, prioritize, and remediate risks seamlessly across on-prem and cloud environments.

Veriti leverages cloud-native tools like AWS GuardDuty, CNAPPs and IaaS providers alongside traditional security platforms to identify the root cause of vulnerabilities and enforce compensating controls across hybrid environments. It bridges silos between DevOps, DevSecOps and security operations, enforces compensating controls, and protects critical assets—making safe, predictable cloud security a reality. Additionally, Veriti's unique ability to propagate Indicators of Compromise (IoCs) enterprise-wide—across firewalls, endpoints, and cloud workloads—ensures comprehensive protection that minimizes lateral movement and hardens defenses against emerging threats. This cross-platform orchestration and intelligent correlation fills critical gaps left by siloed security solutions, delivering faster, safer, and more effective remediation at scale.

## Benefits

### Cloud Native Hardening

Enforces security measures to block threats and maintain a unified security posture across cloud and on-prem environments.

### Cloud Native Exposure Enforcement

Provides bi-directional protection by identifying and mitigating threats seamlessly across infrastructures.

### Cloud Native Safe Remediation

Leveraging Infrastructure as Code, APIs, and automations to remediate vulnerabilities at scale without disrupting operations.

Veriti Cloud

# Key Features

- ☁ Direct configuration changes across cloud platforms.
- ☁ Automated actions via integrations with SIEM, SOAR, and ITSM workflows.
- ☁ Noise reduction through aggregated and advanced deduplication.
- ☁ Real-time correlation between exposures and the misconfigurations that caused them.
- ☁ Cross-correlation of vulnerabilities with compensating controls.
- ☁ Integrated remediation engine spanning cloud, hybrid, and on-premises environments.
- ☁ Proactive enforcement of Indicators of Compromise (IoCs) across the ecosystem.

Veriti is an AI-driven exposure assessment and remediation platform that continuously identifies vulnerabilities, misconfigurations, and exploitability across the entire security stack on-prem and in the cloud. By leveraging compensating controls and layered defense strategies, Veriti ensures potential and active threats are proactively managed and remediated – all without disrupting business continuity.
